LETTER OF TRANSMITTAL

TO HIS EXCELLENCY, HON. O. MAX GARDNER,
Governor of North Carolina.

DEAR SIR:

We have the honor of transmitting to your Excellency the Biennial Report of the Board of Directors and the Superintendent of The State Industrial Farm Colony for Women for the two years ended, June 30, 1932.

Respectfully submitted,

R. F. BEASLEY,

Chairman.

REPORT OF THE SUPERINTENDENT

• MR. ROLAND F. BEASLEY,
Chairman Board of Directors.

The Colony is located seven miles northwest of Kinston, and is a farm of 488 acres, mostly in wood land.

This institution was opened April 3, 1929. It had no printed report covering the time from then until June 30, 1930, when the biennial period closed.

Forty-two cases are recorded as admitted and twelve paroled during that time. Thus, at the beginning of this biennial period we find on the roll, thirty inmates. In 1930-31 thirty-four were admitted and on March 1, 1931, there were thirty-six inmates and three staff members housed in the building known as "A" Building.

There are two brick dormitory buildings, a cottage in which the farm director lives, a small house originally intended for an infirmary, a store house, dairy barn, mule barn and chicken houses and other sheds and shelters for stock. The capacity of the houses is sixty, without crowding. Eighty could be housed without serious crowding. The first building has four single rooms and five dormitories for four and five beds; it also has the office and small hospital quarters in it. The second building has all single rooms for girls.

For the last four months of 1930-31, a compilation of monthly reports from all staff members tell the following:

The office mail consisted of 438 pieces; all girls' mail censored by the office numbered 543 letters and packages. There were 94 telephone calls.

From the Head Matron's report we find that 305 pieces of new sewing and 129 pieces of mending were done. There were 1,462 treatments given for venereal diseases and 262 common ills and accidents cared for. The visiting physician, Dr. McCuistan, made 17 calls. An alarming condition of trench mouth was found to be existent and Dr. J. Garves Poole was employed to come one-half day each week.

During these four months 9,852 meals were served; 7,184 pieces of work done in the laundry; 377 quarts of canning was done. Outside work done by the girls counted up to 5,213 hours.

For the last year of the biennial period we present the following facts and figures:

Recorded in and out, 782 telephone calls; nearly 5,000 letters and packages.

Venereal disease treatments numbered 4,980 and common ills and accidents 2,400. Dr. McCuistan has called 54 times and Dr. Poole 38 times.

In the sewing department 778 new pieces were made, and 829 old pieces were mended.

The laundry has counted 21,568 pieces through their department.

During the year, 47,320 meals have been cooked and served. Much of this is tray service to sick or isolated cases.

We have had seven runaways in the year; six have been returned, while one is still at large. In the first runaway three girls started out; in twenty-four hours one returned, voluntarily. We identified the men who aided in two escapes and prosecuted four and got judgment in the local courts.

Although these figures seem to loom up as the most vital part of the work here, they are not, but it is a very necessary part of the routine and most interesting to the public as well as to the Departments of State that guide our affairs, both financial and spiritual.

Special case work has been carried through in a small number of cases and the need for professional care in behavior problems has been demonstrated. Women are not reformed en-masse but as individuals; each individual needs to make up her mind that she wants to reform and will work with the influences that are placed where they can play on her life, daily. The women and girls who are sent to the Colony need hospitalization. Seventy-seven per cent of all cases admitted to date have had venereal diseases with one or two types of trouble. Other physical ailments found to be existent when the girl is admitted are: hookworm, thyroid and mastoid troubles, Vincent disease, commonly known as "trench mouth," deficient eyesight and hearing, stomach worms, itch, ringworm, etc.

Many of these are infectious and create serious institutional problems. Case histories are lacking in nearly all cases and the only foundation upon which we can work is the girl's own story, and the examinations we are able to make or have made.

There is such a close relationship between all behavior and the physical condition of the case being studied, that we have come to believe that much anti-social conduct may be changed under the hospitalization treatment. Of course we find cases that try to impose on that phase of our program and are only too ready to blame all their troubles to these conditions.

It is our aim to give to each girl an opportunity to develop a standard of morals, a point of view and a goal, by precept and example, which will support her when she is again free and on her own resources.

The Kinston Clinic and Memorial General Hospital have rendered valuable assistance. Dr. Paul F. Whitaker has made seven complete physical examinations and given special treatment in more than that many cases; Dr. Vance P. Peery has made one complete neurological examination and many special eye, ear, nose and throat examinations. He has operated two tonsil and two double mastoid cases. Dr. Leslie Lee has operated three cases and made several examinations; Dr. Floyd Wooten has cared for several surgical treatments following accidents.

The hospital keeps us supplied with distilled water and has made up special mixtures in their laboratory for us. They also examine the milk for our dairy inspection. In fact, we have used their personnel and equipment as freely as we would if it were our own property and are made to feel that they are glad to render the State such service during the present financial stringency. For the operated cases we have paid regular charity rates for hospital expenses, the doctors have donated their services.

We present here an extract from the report made by Miss Elsa Ernst on a small number of cases she examined:

"The intelligence quotients range from 51 to 107, the mental ages range from 8-2 to 17-1; the chronological ages show girls from the ages of 16 to 49. This wide range however, is, I think, typical of most institutions of your sort, and necessitates a highly specialized and individualized program, such as you are endeavoring at the present time, to establish."

An interesting table is presented below. I gave Miss Ernst a list of girls that we had every reason to believe, from their institutional records, would react as follows: First column, girls who would adjust themselves anywhere; second column, girls who needed the encouragement of understanding supervision in order to adjust themselves to free living; third column, girls who would always need supervision.

Miss Ernst took our lists and made up a chart with the following comment:

"In regard to the point we discussed a number of times, that the most able of the inmates were not necessarily the most stable nor the most easily adjusted, I am sure you will find the accompanying little chart most interesting. I have placed the three groups as you have given them to me, in the order in which they stand on the I. Q. line stretching from 50 to 100. It is easily seen from this chart that I. Q. is by no means the whole story, nor even the main factor in the story."

I. Q. Scale	I. Q.	Case No.	M. A.	I. Q.	Case No.	M. A.	I. Q.	Case No.	M. A.
100.....	107	1	17-1						
	98	2	15-9						
90.....	94	3	15-0						
							88	16	14-1
80.....	82	4	13-1						
					10	12-0			
70.....	73	5 & 6	11-8	75			72	17	11-6
	69	7	11-0				64	18	10-3
60.....	63	23	10-0	60	11	9-7	63	19-20	10-1
	59	8	9-5	53	12	8-6	57	21-22	9-2
				52	13	8-4			
50.....	54	24	8-7	51	14 & 15	8-2			

Ten months have passed since the above chart was made and in the light of actual adjustments made by the girls on parole, there must be three changes made. The three borderline cases Nos. 5-6-7 must be placed in the second column. They cannot face life and hold true to their good resolutions without that "understanding supervision" mentioned earlier in this report.

It is also interesting to note that the three lower I. Q.'s in column one have adjusted very satisfactorily.

Through all this psychological experimentation, Dr. Harry W. Crane, Director Division Mental Health and Hygiene, State Board Charities and Public Welfare, has given of his time and personal attention and has given in his office, many examinations. If we have taken a case to him, he has immediately made us believe that he is truly interested in the girl. He has given the final check-up for us in a number of cases.

Life-long habits cannot be changed overnight. A highly specialized professional advisor is absolutely necessary, but just as essential as this type of consultant, is the regular staff of institution workers of as highly specialized training and experience. To the staff now serving at the Colony I wish to be clearly understood as crediting them with the satisfactory results obtained with the girls.

We want to take this opportunity to express our appreciation to the Superintendent of Caswell Training School, Dr. W. H. Dixon, for his many courtesies including the services of Miss Ernst; to the Kinston Clinic and Memorial General Hospital for their coöperation and valuable services donated to the cause of life adjustments through physical adjustments; to the club women of the State for their donations of shrubbery and trees for the permanent improvement of the campus, and for several magazine subscriptions; to the pastors of the Kinston churches who have supplied us with church services nearly every Sunday afternoon of the year. For their special calls we add another word of thanks. Once in a while a case really needs the priestly service only obtainable by calling on one of our socially-minded pastors. We know we can call upon these men for that service. We are indebted to the Unity School of Practical Religion of Kansas City, Mo., for literature and friendly personal interest in the girls.

When our girls leave the Colony they pass into the custody of the County Welfare Departments of their homes. The length of their stay with us is entirely due to their own adjustments and their physical conditions.

The Colony tries to let the girls live a normal, natural life under the acceptable standards set by society. The first floor of "B" cottage houses honor girls. Since establishing this system, no girl has had to be moved for breaking the trust placed in her.

The past year on the farm was very satisfactory. A permanent pasture has been fenced and planted; two new chicken houses have been built, using home-made furnaces for heating; wood has been furnished for the majority of the fuel used; some swamp has been cleared; the ditch banks have been kept clean; in fact, the farm begins to take on the appearance of a well-kept truck farm. Pigs and chickens seem to thrive here and a development in both of these lines has been started.

A forest fire threatened all the farm buildings and it required outside help to stop it. The fire department and the police department of Kinston responded with cars and men and in less than three hours the fire was out. We have found both city and county officials at Kinston always ready to lend a hand and we appreciate their friendly spirit of coöperation.

A financial statement is included in the exhibits. We have done some things we thought impossible. We used 67% of the total appropriation. There is just so much money available, we will take our share and try to make a creditable accounting. We increased the population 50% this year.

MARIAN F. GALLUP,

Superintendent.

TABLE NO. 9
DENTAL REPORT OF WORK DONE AT STATE FARM COLONY
FOR WOMEN

June 1, 1931, through June 30, 1932

Number of visits	36
Number of patients examined	92
Number of patients treated	87
Number showing positive Vincent's Infection	57
Number of patients showing pyorrhea	22
Number of teeth extracted (apical infection).....	71
Number of treatments given	375
Number of partially erupted Third Molars	23
Number of cavities of decay	464
Number of teeth extracted because of decay	2
Number of patients showing no cavities	9
Number of patients showing positive Wassermann and positive Vincent's	18
Average number of patients seen each visit	10½

There are several significant facts revealed by these figures.

First—Over 50% showed a Vincent's Infection, either acute or chronic. A microscopical examination was made of a smear taken from the mouth of every patient.

Those receiving intra venous injections of Neo Arsphenamin required a fewer number of local treatments in the mouth—a quicker recovery.

Second—Of the seventy-three teeth extracted sixty-nine showed apical infection. In many cases there were several of the so-called pus sacs found in one mouth.

Third—There was clinical evidence of twenty-three partially erupted third molars. No doubt an X-ray examination would have shown a still larger number of unerupted and impacted teeth.

Fourth—An average of over five cavities of decay per patient was found. In some instances fifteen to eighteen cavities were charted.

To summarize in a few words it would be hard to find a hundred mouths in a more unhygienic, a more horrible condition.

(Signed) J. GARVES POOLE, D.D.S.
